The problems of adaptation of curricula to the two-level educational system were touched upon during the meetings. Colleagues from Poland demonstrated the organization of educational and scientific work, as well as procedures of practices and degree works. Also all the participants perused master educational programs and research areas. Warsaw University possesses the comprehensive apparatus base, which allows fulfilling of researches at a highest level. Scientists publish their researches at famous scientific journals.

During five days Russian university faculties lived at the Urvitalt field experimental station of the Warsaw University biological faculty near the Mazur Lake. The lectures of Warsaw professors devoted to the ecological and limnological researches were attended and

discussed. Lectures were accompanied by visits the research subject such as forests, fields and lakes as well as both of other field experimental stations. Russian university faculties were familiarized with state-of-the-art methods of ecological monitoring of natural environment. They perused the preprocessing of collected samples. Residence at the field experimental station was attended by discussions with professors and undergraduates.

After the completion of Week of Training the participants visited the ruins of lapsed Hitler residence in Volshantze and the concentration camp Auschwitz in Oswiecim, now it is the World War II memorial.

The Week of Training was full of content and productive. All the participants acquired knowledge of the recycling of different wastes as well as state of environment in European countries. They acquired the skill in the management of the student practice in conservation areas as well as in industrial enterprises. The experience of the team undergraduate research management in the frames of specific issue was familiarized.
